

The Formation and Evolution of *Stellar Clusters*

From Star Cluster Ecology to Tracers of Galaxy Evolution

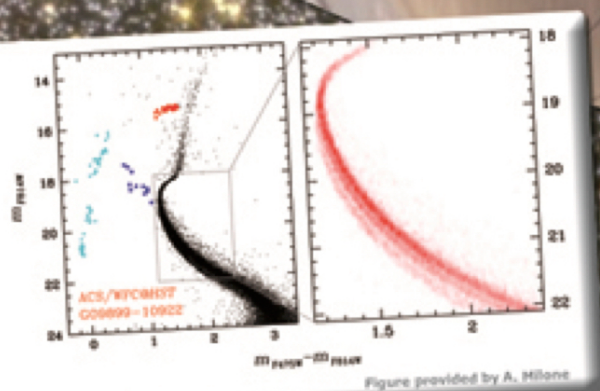

Vatican Observatory
Castel Gandolfo

13th summer school

3 - 29 June 2012

in Observational
Astronomy and Astrophysics

NASA and Ron Gilliland (STScI)

This school will explore the chemical and dynamical aspects of the formation and evolution of globular clusters in the Milky Way and beyond. The Faculty and several invited speakers will present a comprehensive series of lectures and hands-on observational and numerical experiments that, together with the unique social experience, promises to make this school an unforgettable experience!
